This species has long been confused with Tipula (Lunatipula) pleuracicula Alexander 1915 (arizonica Alexander, 1916; monochroma Dietz, 1919) and I am particularly indebted to Dr. Alan Stone for examining the types of my species, now in the United States National Museum, and thus settling the identity of this well-marked fly. The above names all pertain to a smaller yellow crane-fly that is allied to T. (L.) splendens Doane, 1901, having the basistyle of the male hypopygium produced into a much more slender stiletto-like point than in the present species. In an earlier report (Amer. Midl. Nat., 30: 732; 1943) I had referred to the present fly as being pleuracicula and this name should be corrected to saxemontana.

Tick Collections at Army Installations in the Fourth Service Command

By Stanley J. Carpenter, Prov. W. Chamberlain and Leonora Peeples, Fourth Service Command Medical Laboratory, Fort McPherson, Georgia

Numerous collections of ticks have been made by Army personnel in the seven states comprising the Fourth Service Command during 1943, 1944, and 1945, and forwarded to the Fourth Service Command Medical Laboratory for identification. The states included in the Fourth Service Command are Alabama, Florida, Georgia, Mississippi, North Carolina, South Carolina and Tennessee.

The collections are summarized in Table 1. During 1943 to 1945, the following species were taken: Amblyomma americanum (Linnaeus), A. dissimile Koch, A. tuberculatum Marx, Dermacentor albipictus Packard, D. variabilis (Say), Haemaphysalis leporis-palustris Packard, Lvodes ricinus scapularis Say, Rhipicephalus sanguineus Latreille, and Ornithodorus turicata Duges. A total of 3,227 specimens, representing 47 localities, are included.

¹ Major, Sanitary Corps, Army of The United States.

² 2nd Lieutenant, Sanitary Corps, Army of The United States.

³ SP-5, Medical Technician.

Dragonflies (Odonata) Collected in Pennsylvania and New Jersey in 1945

By George H. Beatty, III, Merion, Pennsylvania

(Continued from page 56)

Erythrodiplax berenice Drury.

New Jersey: Upton Ponds, 1 &, 22 July.

This individual had apparently wandered from its normal brackish habitat.

Libellula deplanata Rambur.

New Jersey: Whitesbog, 1 \, 29 April; Upton, 2 \, 4 \, 13 May; 8 \, 20 May; 1 \, 3, 24 June; Whitesbog, 1 \, 3, 1 \, 29 June.

Since *c.rusta* Say and *deplanata* Rambur are evidently forms of the same species, these specimens from New Jersey, the tension zone of the two forms, combine the characters of both. At all manner of small ponds, ditches, and sand pits, *deplanata* was abundant in May.
